

# GLM Lasermeßtechnik GmbH – Scanning and Tracking

## Scanning and Tracking

### Scanning

The new 3D measuring systems ([NET1AXII](#) and [NET05AXII](#)) by Sokkia merge the highest degree of precision, sturdiness together with all advantages of motorized surveying. Together with the new hardware platform of our [3-DIM Observer Motorized](#), tracking, scanning, monitoring, and the functionality of a total station were combined within one system.

Compared with conventional scanners, points are generated in a much-improved precision class. Results can be utilized immediately without additional analysis software.

### Tracking

The [3-DIM Observer Motorized](#) also supports the tracking function. A prism sphere helps to measure points along any surface.

[Scanning Thor Heyerdahl \(758 kB\)](#)

[NET05AXII NET1AXII Allrounder \(322 kB\)](#)
